Unipak® Jointing Compound
- Original

Unipak® Jointing Compound is approved for drinking water.

Jointing Compound is a grey, high-viscosity packing ointment consisting of a saponification mixed with naturally occurring minerals and viscosity-regulation oils and water. All ingredients are permitted as food additives and the like.

APPROVED FOR DRINKING WATER GDV

Unipak® Jointing Compound

Jointing Compound, together with packing twine, provides perfectly tight threaded joints, as well as making assembly and later disassembly easier. Use of Unipak jointing compounds provides - in contrast to e.g. threaded tape - in addition, great flexibility in connection with adjusting the pipe joints, as they remain tight when screwed back.

Approved for drinking water: GDV 06/00002

INTRUCTIONS FOR USE:

Unipak jointing compound is used together with packing twine for packing threaded joints on pipe systems cold and hot water and low-pressure steam. Packing twine is applied to the thread evenly and tightly in the direction of twisting to its full extent. Next, an appropriate amount of Unipak jointing compound is applied to the entire packed thread in an even layer, after which clamping can be carried out immediately and the system can be put into use. Excess packing ointment is wiped off with a cloth or similar.

The above information is given based on test and experience. As we have no control over the use of the product, trial installation is recommended to ensure to ensure that the product is suitable for the intended installation.
